

Scenario C: Fairness Case.

Input

Quantum = 2

Process	Arrival Time	Burst Time
P1	0	8
P2	0	8
P3	0	8

Analysis

- **Lower average waiting time:** SJF.
- **Lower response time:** Round Robin
- **Fairness:** Round Robin is clearly fair (equal CPU sharing)
- **Short job efficiency:** Not relevant (all equal)
- **Quantum effect:** Determines how frequently processes rotate
- **Recommendation:**
Round Robin is better for fairness and equal service.

Conclusion

- Round Robin was more balanced across all processes
- SJF had no major advantage
- RR ensured equal CPU access
- Quantum controlled fairness granularity
